Goals of the Project

The primary aims of the Math Zoo Project include:

- Understanding the relationship between area and perimeter
- Practicing calculation of areas and perimeters of various shapes
- Applying math concepts to creative design tasks

- Developing teamwork and presentation skills

Planning the Math Zoo Project

Step 1: Setting Objectives and Scope

Before starting, clarify what students should achieve:

- Design at least three different animal enclosures
- Calculate the area and perimeter for each enclosure
- Include pathways, visitor areas, and facilities
- Present the overall zoo layout with explanations

Define the scope based on grade level and available resources, ensuring complexity is suitable for learners.

Step 2: Gathering Materials and Resources

Students will need:

- Graph paper or digital design tools
- Rulers, protractors, and measuring tapes
- Color pencils or markers
- Access to mathematical formulas for area and perimeter
- Research materials about zoo enclosures and animal habitats

Step 3: Selecting Shapes and Designing Enclosures

Encourage students to:

- Choose various shapes for enclosures (rectangles, squares, circles, triangles, irregular shapes)
- Think about the animals? habitat needs and space requirements
- Design pathways and visitor areas that connect enclosures logically

Applying Math Concepts: Calculating Area and Perimeter

Understanding Formulas

Students should familiarize themselves with basic formulas:

- **Rectangle:**Area = length $\times$ widthPerimeter = $2 \times (\text{length} + \text{width})$
- **Square:**Area = side $\times$ sidePerimeter = $4 \times \text{side}$
- **Circle:**Area = $\pi \times \text{radius}^2$ Perimeter (Circumference) = $2 \times \pi \times \text{radius}$
- **Triangle:**Area = $\frac{1}{2} \times \text{base} \times \text{height}$ Perimeter = sum of all sides

Encourage students to practice these formulas with sample shapes before applying them to their designs.

Calculating Areas and Perimeters of Enclosures

Steps for students:

- Draw the shape of the enclosure on graph paper for accuracy.
- Measure or decide the dimensions based on scale.
- Apply the relevant formula to find the area and perimeter.
- Record all measurements and calculations.

Example: Designing a Lion Enclosure

Suppose a student designs a rectangular lion enclosure:

- Length: 20 meters
- Width: 15 meters

Calculations:

- Area = $20 \times 15 = 300$ square meters
- Perimeter = $2 \times (20 + 15) = 70$ meters

This process helps students understand how the size of enclosures correlates with the animals' needs and space management.

Integrating Creativity and Real-World Applications

Designing a Complete Zoo Layout

Beyond individual enclosures, students can:

- Plan pathways connecting different animal areas
- Allocate space for visitor amenities like benches, restrooms, and food stalls
- Consider accessibility and safety standards

Encourage students to:

- Use scaled drawings to represent the entire zoo
- Include labels and explanations for each section
- Calculate the total area of the zoo and the perimeter of the entire layout

Incorporating Sustainability and Animal Welfare

Prompt students to think about:

- Natural barriers and environmental features
- Space optimization to maximize animal comfort
- Using math to minimize waste and resource usage

This adds a layer of real-world relevance, highlighting how math impacts ecological and animal welfare considerations.

Presentation and Evaluation

Presenting the Project

Students can:
