Qu'est-ce qu'une carte géologique ?

Définition et objectif

Une carte géologique est une représentation graphique de la répartition, de la nature et de l'âge des roches à la surface de la Terre dans une zone donnée. Elle permet d'identifier les formations rocheuses, leur succession stratigraphique, ainsi que les structures géologiques telles que les failles ou les plis.

L'objectif principal de cette carte est d'aider à la compréhension de l'histoire géologique du territoire, de ses ressources, de ses risques naturels, ainsi que de ses potentialités pour l'aménagement du territoire.

Les éléments représentés sur une carte géologique

Une carte géologique typique inclut :

- Les différents types de roches (sédimentaires, métamorphiques, magmatiques)
- Les unités géologiques, souvent colorées pour distinguer leur âge ou leur nature
- Les structures géologiques comme les failles, les plis, ou les zones de fracture
- Les ressources naturelles (eau, minéraux, fossiles)
- Les limites entre différentes unités géologiques

Les cartes modernes intègrent aussi souvent des données géophysiques ou géochimiques pour

enrichir leur valeur scientifique et pratique.
