Question: Describe the process of photosynthesis. Include the raw materials and the products formed.

Answer:

Photosynthesis is the process by which green plants prepare their food using sunlight. It occurs mainly in the leaves, where chlorophyll absorbs light energy. The raw materials for photosynthesis are carbon dioxide (from the air) and water (from the soil). Using light energy, the plant converts

these into glucose (a form of sugar) and oxygen. The overall chemical equation is:

This process is vital for the survival of plants and provides oxygen for other living organisms.

Sample Practical/Data Analysis Question

Question: A student measures the boiling point of water at different altitudes and records the following data:

| Altitude (meters) | Boiling Point (°C) |

|-----|-----|

| 0 | 100 |

| 500 | 98 |

| 1000 | 96 |

| 1500 | 94 |

Question: Plot the data on a graph and describe the relationship between altitude and boiling point.

Answer:

- Plot altitude on the x-axis and boiling point on the y-axis.
- The graph shows a downward trend, indicating that as altitude increases, the boiling point decreases.
